

Instrument Manufacture and Investigative Surveys

Monex GeoScope Pty Ltd manufactures high calibre geophysical equipment for use in the geotechnical and geophysical industries worldwide. Current products available for purchase include terraTEM, terraTX-50, TRC, surface induction and B-field sensors, and downhole induction and B-field tools including VECTEM. Equipment is also available for rental.

A consulting service is also available through GeoScope Development & Consulting. High resolution surveys are available for mineral exploration, environmental, groundwater and urban renewal surveys. Comprehensive reports, complete with sub-surface imaging and analysis, are provided. Also available are non-destructive testing of sub-surface assets including accurate measurements of ferrous pipe wall thickness. In addition, software development services are available.
